1. Project Information

1.1 Title of the Web Project

STREAKUP – Routine Tracker

2.2 Problem Statement

What problem does your webpage/web application address?

STREAKUP addresses the difficulty of maintaining consistent daily routines and tracking progress toward personal goals. It provides a simple webpage where users can add routine tasks, mark completed tasks, delete tasks, and view their daily progress.

1.3 Objective of the Project

Mention the main objectives of developing the webpage.

1. Help users create and manage daily routine tasks.

2. Allow users to track completed routines and view progress visually.

3. Encourage consistency through a simple day-streak indicator.

2. Web Project Description

2.1 Brief Description

Describe your developed webpage/web application in 100-150 words.

STREAKUP is a routine tracker web application designed to help users build, monitor, and maintain consistent daily habits. The website provides a simple and visually organized interface with five main sections: Home, About, Routine, Progress, and Contact. Users can add their own routine tasks, mark tasks as completed using checkboxes, and delete tasks when they are no longer needed. The Progress section automatically calculates the percentage of completed tasks and displays the completed count, total task count, and a simple day-streak indicator. The project uses HTML5 for the webpage structure, CSS3 for styling, layout, responsive design, backgrounds, doodles, and visual elements, and JavaScript for interactive task management and progress calculation. The design uses a black-and-white aesthetic with grid backgrounds and handwritten-style decorative elements.

2.2 Target Users

Who will use your webpage?

☒ Students ☐ Faculty ☐ Customers ☒ General Public ☐ Organization ☐ Other: _____

2.3 Key Features

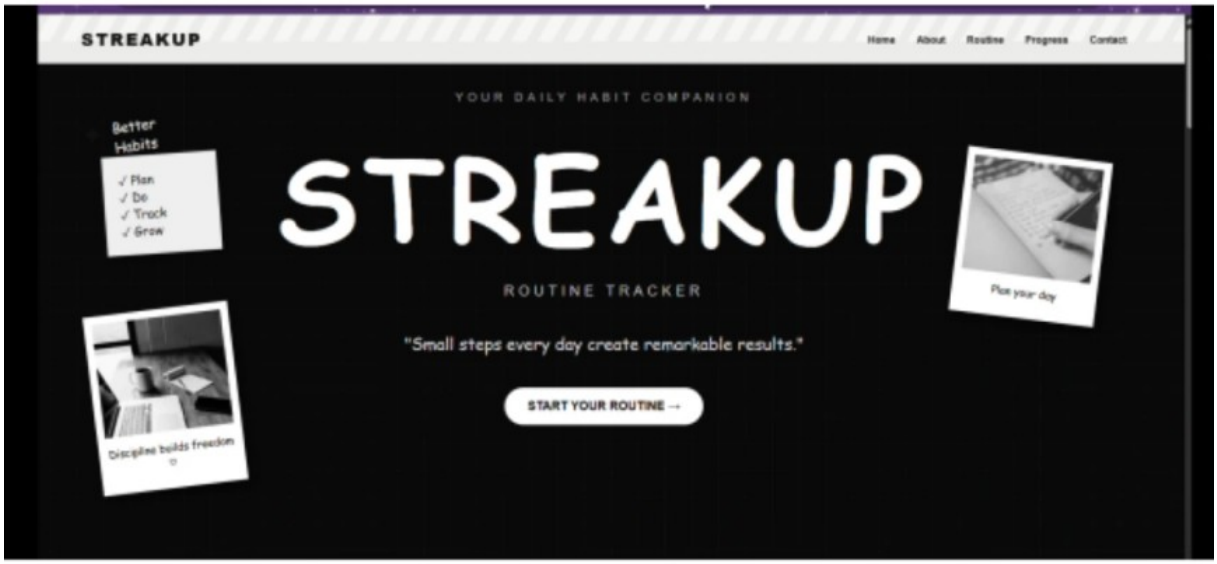

S.No.	Feature	Description
1	Add routine tasks	Users can enter a routine and add it to the routine list.
2	Checklist tracking	Users can mark routines as completed using checkboxes.
3	Delete routines	Users can remove unwanted routine tasks from the list.
4	Automatic progress	JavaScript calculates the completed-task percentage automatically.
5	Progress dashboard	Shows percentage, completed tasks, total tasks, and day streak.
6	Responsive design	CSS media queries adapt the layout for smaller screens.

3. Technologies Used

Technology	Used ✓	Purpose
HTML5	✓	Creates the structure and content of the webpage.
CSS3	✓	Provides layout, black-and-white styling, backgrounds, doodles, and responsive design.
JavaScript	✓	Adds/deletes routines, handles checkboxes, calculates progress, and updates the streak.
Bootstrap		Not used in the supplied project.
Tailwind CSS		Not used in the supplied project.
Other 1		None.
Other 2		None.

4. Learning Outcomes

What did the team learn from this project?

1. Learned how to structure a multi-section webpage using HTML5.

2. Learned how to use CSS3 for responsive design and creative visual styling.

3. Learned how to use JavaScript and DOM manipulation to make the routine tracker interactive.

Technical Skills Acquired

☒ HTML ☒ CSS ☒ Responsive Web Design ☒ JavaScript ☒ DOM Manipulation

☐ Form Validation ☒ Debugging ☐ Git / GitHub ☒ UI/UX Design ☒ Teamwork

☐ Presentation Skills

6. Future Enhancements

Mention features that can be added in the future.

1. Add local storage or a database so routines and progress remain saved after closing the browser.

2. Add user accounts and calendar-based history for tracking streaks over multiple days.

3. Add reminders, notifications, and charts for longer-term habit analysis.

7. Challenges Faced

Describe the major challenges encountered during development.

The main challenges were designing a clean multi-section layout, making the routine list interactive, and updating the progress display correctly when tasks were added, completed, or deleted.

How did the team overcome these challenges?

The team overcame these challenges by organizing the HTML into clear sections, using CSS classes for consistent styling, and using JavaScript DOM methods to update tasks and progress dynamically.

8. Conclusion

Provide a brief conclusion about the developed web project.

STREAKUP successfully demonstrates a functional routine-tracking webpage built with HTML5, CSS3, and JavaScript. It allows users to add, complete, and delete routines while automatically displaying daily progress and a simple streak value.

9. Project Submission Checklist

Requirement	Submitted ✓
